SUMMARY

Curious and creative developer with a strong foundation in C#, JavaScript, and SQL, passionate about solving real-world problems with clean and intuitive code. From redesigning enterprise systems to building real-life tools like a shelf-life tracking app for Starbucks partners, I approach every project with ownership, attention to detail, and a drive to make a difference. With experience across React, ASP.NET, Azure, and mobile development, I love turning challenges into opportunities to learn, grow, and build things that truly help people.

WORK EXPERIENCES

Junior Software Developer & Data Analyst

Aug 2022 - Aug 2023

Manse eSolution Inc.

Fergus, ON

- Supported the development of a grain elevator management system used by 80+ clients across Ontario to track grain movement, from truck intake to storage and release.
- Transformed a static Google Maps view into an interactive customer management tool using Delphi, enabling users to select multiple clients on the map, view full lists, and perform bulk actions like group emailing and batch edits via drag-and-drop improving operational speed and reducing manual processes.
- Wrote and optimized complex MySQL queries, including multi-table joins and condition-based updates, to maintain real-time accuracy across ticketing systems that recorded incoming and outgoing shipments.
- Managed and cleaned large-scale client data, resolving inconsistencies in high-volume grain inventory tables—leading to a 30% reduction in query resolution time and smoother database operations.
- Designed and implemented custom Crystal Reports to meet diverse client needs, helping operators and managers make faster, data-informed decisions.
- Improved the system's UI/UX to reflect a more intuitive and professional interface, drawing from design sensitivity honed during prior creative experience.

PROJECTS

Starbucks Partner Support Shelf-Life Tracker App [Github](#)

Oct 2024 - Present

- Designed and developed a fully deployed mobile app using React Native and C# ASP.NET Core, currently in active use by Starbucks partners to track product shelf-life dates efficiently.
- Built a real-time search feature using RESTful APIs, reducing manual effort and errors, and delivering responses under 200ms.
- Created custom widgets for both iOS and Android, enabling instant access to shelf-life info without opening the app—boosting engagement by 20%.
- Deployed on Azure App Service with SQL Server, ensuring scalability and secure cloud-based storage.
- Implemented time zone conversion logic for 100% accurate global date handling, ensuring shelf-life clarity across all regions.
- Currently managing and maintaining the app, which processes over 500+ daily API requests, ensuring consistent uptime, user access, and ongoing performance optimization.

Initiate News Mobile Application [GitHub](#)

Jan 2024 - Apr 2024

- Led a team of three developers through a four-month project lifecycle, from initial concept to successful deployment, ensuring on-time delivery while meeting all project milestones.
- Designed and implemented the front end using Kotlin to create a seamless and intuitive user experience.
- Developed efficient and secure RESTful APIs in C# to handle data communication between front-end and back-end systems.
- Strengthened app security by integrating Firebase for OTP authentication and reducing unauthorized access risks.
- Integrated the ChatGPT API to generate keyword news summaries from lengthy articles automatically.

EDUCATION

Computer Programming and Analysis (Co-op), Advanced Diploma

Sep 2020 - Apr 2024

Conestoga College, Waterloo, ON
