SUMMARY

Software-minded Systems Engineer with experience in Smart Factory automation, database-driven troubleshooting, and system integration. Skilled in designing structured AI-assisted analysis workflows and Oracle SQL diagnostic tools to analyze complex system logic, validate production data, and identify root causes of system failures, process delays, and data inconsistencies. Strong at turning operational requirements, business rules, and large-scale data into repeatable engineering solutions, with a background in application development. Open to relocating.

SKILLS

- **Languages:** C#, JavaScript, Kotlin, Swift, Python (automation scripts), Delphi
- **Frameworks / Platforms:** React, React Native, ASP.NET Core, .NET, Node.js
- **Databases:** Oracle, SQL Server, MySQL, Database Design & Optimization
- **Cloud & DevOps:** Azure App Service, Azure DevOps, Docker, CI/CD Pipelines, Application Insights

WORK EXPERIENCES

Manufacturing Systems Engineer (MCS/RTD)

Mar 2026 - Present

LG CNS America

Windsor, ON

- Design structured AI-assisted prompt workflows and Oracle SQL diagnostic queries to break down complex Smart Factory logic, validate production data, and identify root causes of system failures, process delays, and command conflicts.
- Achieve 100% analysis of assigned business logic, documenting hard filters, priority conditions, dispatch scenarios, and candidate loss points to improve troubleshooting visibility across automated logistics operations.
- Analyze and design logistics operation scenarios by translating complex customer requirements into automated system workflows.
- Perform proactive system monitoring and data analysis to detect operational anomalies, prevent material flow interruptions, and support 24/7 manufacturing continuity.

Junior Software Developer & Data Analyst

Aug 2022 - Aug 2023

Manse eSolution Inc.

Fergus, ON

- Managed and supported software used by 80+ grain elevator clients, working directly with customers to troubleshoot application issues and resolve complex database errors in real time.
- Communicated with clients to understand urgent data issues, then modified and restored MySQL databases to correct inconsistencies and recover corrupted records, ensuring accuracy during peak harvest seasons.
- Enhanced and maintained legacy Delphi-based grain elevator software during off-season, adding new features and improving system functionality based on client feedback.

PROJECTS

Starbucks Partner Support Shelf-Life Tracker App [Github](#) [AppStore](#) [PlayStore](#)

Oct 2024 - Present

- Developed and deployed a mobile app for iOS and Android, **monetized via AdMob**, achieving real-world usage and revenue.
- Built and maintained scalable APIs using ASP.NET Core/C#, handling 3,000+ daily calls with 99.6% success rate.
- Created a custom widget for iOS and Android platforms, enabling users to instantly access expiration dates without opening the app, significantly improving usability and saving time, resulting in a 20% increase in user engagement.

EDUCATION

Computer Science, Bachelor's Degree (Online)

Mar 2026 - Present

Korea National Open University, Seoul, Korea

Computer Programming and Analysis (Co-op), Advanced Diploma

Sep 2020 - Apr 2024

Conestoga College, Waterloo, ON
